# Taxonomy on Edit distance

Definition: The edit distance between two strings is defined as the minimum number of edits needed to transform one string into the other, with the allowable edit operations being insertion, deletion, or substitution of a single character.

SOVIET PHYSICS-DOKLADY

VOL. 10, NO. 8

FEBRUARY, 1966

CYBERNETICS AND CONTROL THEORY

## BINARY CODES CAPABLE OF CORRECTING DELETIONS, INSERTIONS, AND REVERSALS

V. I. Levenshtein

(Presented by Academician P. S. Novikov, January 4, 1965)

Translated from Doklady Akademii Nauk SSSR, Vol. 163, No. 4,

pp. 845-848, August, 1965

Original article submitted January 2, 1965

Investigations of transmission of binary information usually consider a channel model in which failures of the type  $0 \rightarrow 1$  and  $1 \rightarrow 0$  (which we will call reversals) are admitted. In the present paper

were inserted (deleted) from at least one of the words  $x$  or  $y$  to obtain  $z$  are deleted from (inserted into) the word  $z$ , then, as we can easily see, we obtain a word that can be obtained from both  $x$  and  $y$

# Taxonomy on Edit distance

Definition: The edit distance between two strings is defined as the minimum number of edits needed to transform one string into the other, with the allowable edit operations being insertion, deletion, or substitution of a single character.

kitten → sitten (substitution of 'k' with 's')  
sitten → sittin (substitution of 'e' with 'i')  
sittin → sitting (insert 'g' at the end).

Populations

FRANÇOIS ROUSSET

MONOGRAPHS IN POPULATION BIOLOGY 45

Natural populations are subdivided

(Landscape, geography, behavior, ...)

→ Subdivisions (demes) maintain genetic cohesion through an exchange of reproducing migrants

→ Pattern of migration and timing of separation between demes will have a profound effect on the degree of differentiation between demes

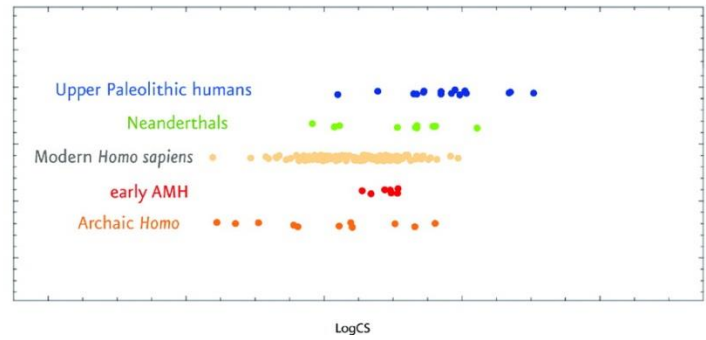

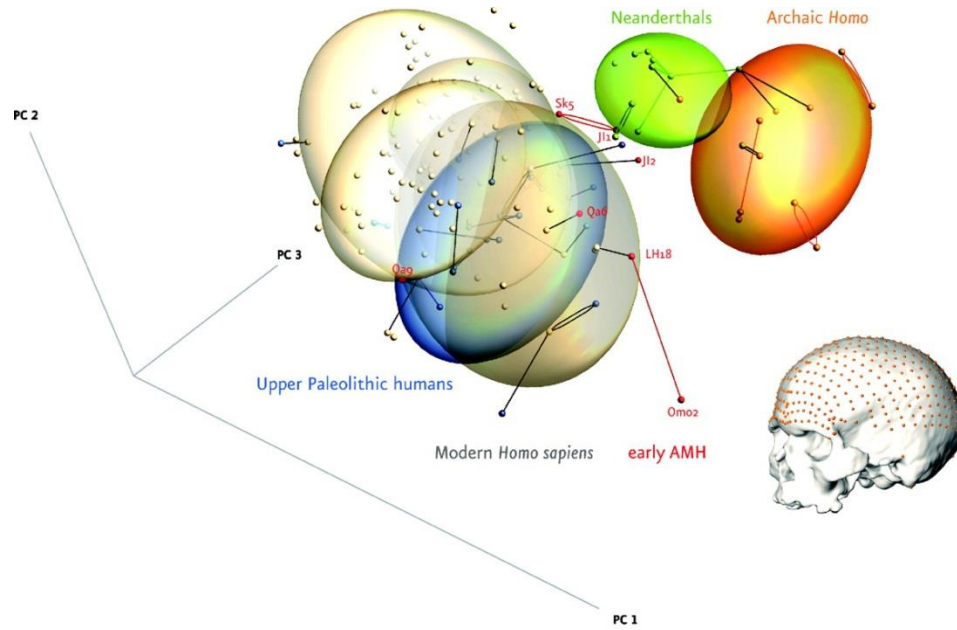

→ Subdivisions may be hierarchically arranged, at different spatial or geographical scales

(definitions after Excoffier)

Pop. number between 10 and 50  
Ind. number=200  
Locus number between 20 and 400

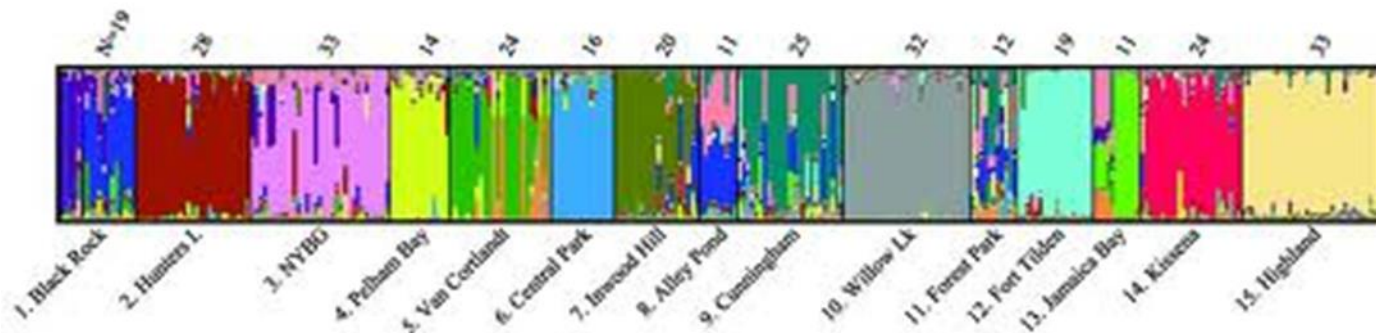

Use of Avakas to test several sampling scenario (but not parallel)

One run: intensive  
Distribution: Sampling, Bootstrap

# Objective & intuitions of the Structure method

- Identify clusters of individuals, who are genetically more similar to each other than to ones from another cluster
- Allele frequencies differ among reproductively isolated populations
- Perfectly informative marker: an allele that occurs in only one population
- Bayesian method

# Genetic ancestry analyses

- **Structure** software (*Quercus* sp., *Prunus* sp.)
  - **Frappe** software (Tang's lab at <http://med.stanford.edu/tanglab/software/frappe.html>)
- Not parallel analyses
- But see a R package to run STRUCTURE in parallel (ParallelStructure) – a Python package for fast-Structure

One run: intensive  
Distribution: Sampling, Bootstrap

- Diagno-Syst char format
- Formats charfile
- Diagno-Syst
- Disseq reads to taxo
- Taxonomic inventory from NGS reads

The Genome Transcriptome Facility of Bordeaux Pierroton is pleased to provide a Galaxy server to its users.

The service is provided AS IS WITHOUT ANY WARRANTY.

For questions, requests or technical issues, please contact us at [contact.pgtp@pierroton.inra.fr](mailto:contact.pgtp@pierroton.inra.fr).

Quota: 50GB (registered). For additional disk space, [contact us](#)

Deleted datasets and libraries will be automatically purged after 30 days.

### Upload files > 2Go via SFTP

Upload your file via your favourite FTP utility (filezilla, ...)

- host: `sftp://galaxy-pgtp.pierroton.inra.fr`
- login: email address you used to register at this Galaxy server
